

Putzmeister

Truck-mounted concrete pump 20-4

Less support surface, more utilisation

True greatness demonstrated in the smallest class

Unimpeded deployment on the smallest possible space

Wherever confined space conditions prevail, this small pump comes through with flying colors.

Whether in halls, under bridges, underpasses or when building multi-storey buildings – the 20-4 is at home on small and medium-sized job sites. The remarkably low unfolding height of 3.9 m plays a major role in this!

Lavish dimensions are at the wrong place here

Only the 20-4 can offer such a support area: 3.40 m at the front and just 2.60 m at the rear – and it stands firmly on an area that is only as wide as the vehicle when the driver's door is open. The compact TR support from Putzmeister allows unimpeded flow of traffic in almost any job site situation.

Full deployment on 2 axles

Thanks to the 2-axle chassis with small wheelbase (min. 4200 mm with MB Axor 1828) the 20-4 moves nimbly through the dense traffic. The low vehicle height of 3.40 m is also ideal for passing through most bridges and underpasses. And thanks to its low total weight, it has reserves for more than enough operating materials and accessories. For this reason, it is ideal for hose delivery.

Chassis and substructure at a glance

- **Low total weight** offers high weight reserves for loading accessories e.g. for hose delivery
- **Fewer obstructions of the surrounding area**, such as traffic, thanks to narrower support widths
- **Compact and manoeuvrable thanks to its 2-axle chassis with small wheelbase**

The placing boom – lightweight indoor champion

This is outstanding: Folded out at just 3.9 m

20-4, this is about a 20 m vertical reach distributed over 4 arms and compactly located in roll Z-folding. With excellent slip into building properties thanks to low unfolding height this boom opens up a wide range of applications such as the concreting of halls or bridges. The 4-arm boom can be folded out quickly and thus saves valuable working time.

Another benefit is the fact that the boom is relatively very light. The weight saving can be used for a higher payload if necessary. And in situations requiring very precise movements of the boom due to cramped conditions, the low weight ensures very direct response and thus user-friendly handling.

Work more accurately – even blindfolded

The fully electronic placing boom control EBC (Ergonic® Boom Control) available as an option ensures noticeable relief of the operator. The convenient joystick allows extremely smooth handling of the boom in one-handed operation. This is because EBC dampens the boom vibrations and ensures that the end hose remains at a constant height during a horizontal movement.

Thanks to a wide range of additional settings of EBC the operator can limit the working area or block certain arm positions. This makes work easier and increases operating safety.

The new boom at a glance

- **Around 20 m vertical reach with 4 arms in roll Z-folding**
- **Direct response characteristics** of the boom control
- **Standard pump line DN 125/5.5"**
- **EBC (optional)** for vibration damping, one-handed control and restriction of workspace
- **Low unfolding height of 3.9 m**

The concrete pump – Efficiency in an instant

It is in your hands

Everything under control and the best overview. This is always extremely simple and comfortable with an EPS-controlled pump, because the graphical display and remote control make operation easier and ensure transparency. On the EGD (Ergonic® Graphic Display) the driver is able to see all relevant machine data and set individual parameters. A reliable failure management system ensures that the machine is fully operational during malfunctions and even in emergency operation.

The output can be controlled

Here, nothing is left to chance, because success can be controlled. Thanks to the computer-aided control via EPS (Ergonic® Pump System), which is integrated into all models, the outstanding performance and comfortable handling of the concrete pump is guaranteed. EPS regulates the pumping process computer-controlled so that it is quieter and the boom vibrations are reduced. The pump data is optimally coordinated with EPS and adapted to the relevant application.

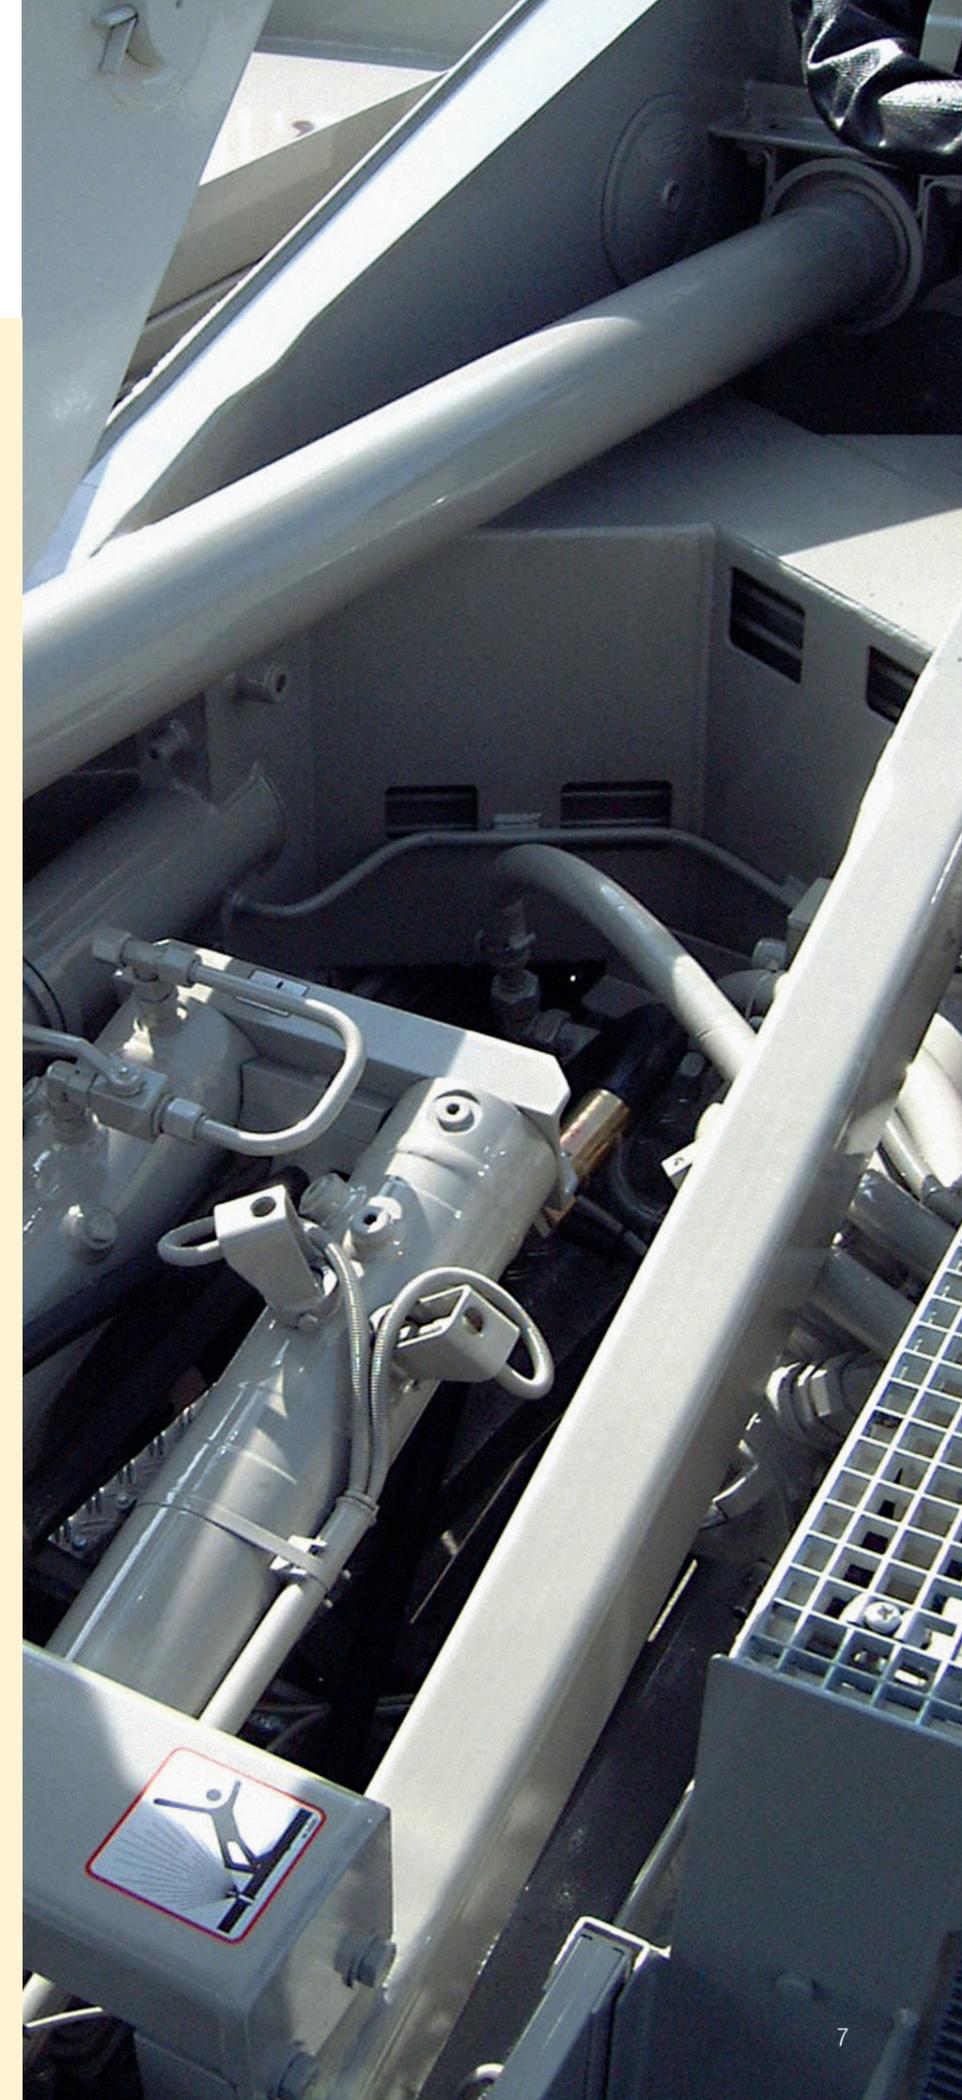

Apart from EPS, there is EOC (Ergonic® Output Control), an effective module for working efficiently while saving at the same time. This is because EOC controls the motor speed when fuel consumption, wear and noise are low. Unfavourable areas are avoided automatically. EOC is included in EPS and is therefore integrated in all pumps as standard.

The same applies to the so-called SN (Surge Neutralizer) control and Push Over. They ensure that switching procedures are optimised and wear-intensive pressure peaks are avoided. Apart from reducing boom vibrations, this prolongs the service life of the drive, pump line and mounting.

The pump at a glance

- **Pump geometry optimally** adapted to all common types of concrete
- **Service-friendly control system** with free flow hydraulics and thus consistently high oil quality
- **Particularly wear-resistant** design of S-tube switch, which guarantees long service life
- **Hopper easily accessible**, thereby allowing easy cleaning, with hinged and pivotable 90° delivery line bend and convenient connection for pipelines on both the right and the left
- **Smooth, optimized pumping** with EPS and EOC, protects the pump and vehicle
- **Optimised smooth switchover with SN control and Push Over** avoids wear-intensive pressure peaks
- **Convenient operation** with display and remote control
- **Lower operating costs** thanks to low-maintenance components

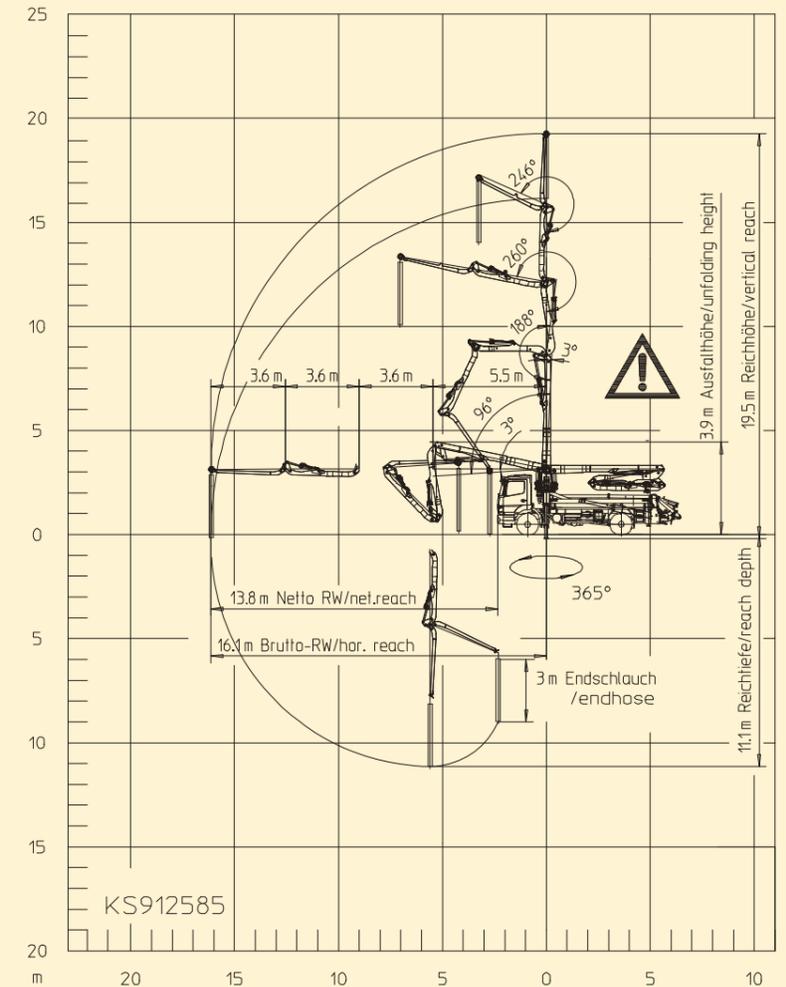

ergonic®
inside

With the Putzmeister 20-4 you get a machine with comprehensive and practice-oriented features already as standard. With the diverse optional equipment, you can also adapt your range of services to the needs and requirements of your customers.

Supplied as standard	Optional
Ergonic® (EPS, EOC and EGD with fault management)	Larger RS 900 hopper with hinged 90° delivery line elbow
Hopper grease lubrication system	Hose magazine on the left side for 21 DN 65 – 4.5 m hoses Storage tray on the left side, 5 m long
Remote control with display	Stainless steel mesh pallets on the left and right for couplings
Flushing water pump 160 l/min 25 bar	Brackets for reduction from DN 125 to DN 65
Anti-slip platform	EBC (Ergonic® Boom Control)
Water tank with 610 l	Pipe carrier on the right side for 8 or 12 DN 125 or DN 100 pipes with aluminium tray
Connections for emergency supply	Upgradeable with the "Sanima-Kit" I (for more information, see brochure BP 3885)
Chromium-plated delivery cylinder	
24 Volt rear boom light	

And much more ...

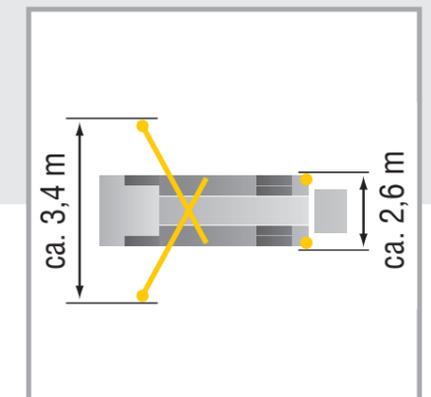

Technical data – Placing boom

Folding method	4-arm roll Z-folding (ZR)
Vertical reach	19.5 m
Range	16.1 m gross
Depth of reach	11.1 m
Unfolding height	3.9 m
End hose length	3 m (optional 4 m)
Delivery lines	DN 125, max. 85 bar
Slewing circle	365°

Technical data – General

Support width	front / rear
	3.4 m / 2.6 m
Overall length	8.8 m
Height	3.4 m

Dimensions may vary depending on model. Total weight dependent on equipment and chassis ≤ 16 t

The end hose squeeze valve (EQV) closes securely and stops the flow of concrete

The central grease lubrication system on the boom reduces the time for daily maintenance

The compressor provides compressed air for various applications, e.g. cleaning

Spray tank with compressed air connection for easy cleaning of the hopper by moistening with release agent beforehand

Technical data – Pump

Type	Output m³/h	Pressure bar	Stroke mm	Cylinder Ø mm	Strokes/min
09 H	90	78	1400	230	26

Build on Putzmeister – in service, parts, training

Everything that sets service apart

Swift assistance, meaningful advice and a reliable supply of genuine Putzmeister accessories and parts – in over 120 countries worldwide. This is what we at Putzmeister understand as first-class service.

Ideally placed to support you

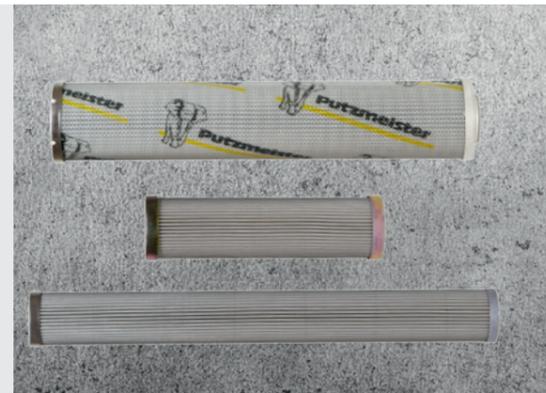

We train our service technicians continuously, provide a close-knit information network and the latest equipment and consistently strive to meet our customers' needs.

Thanks to state-of-the-art technology, our employees have all the relevant technical information about your machine at their fingertips, should the need arise. Allowing us to provide you with the best possible support for emergencies, repairs or preventive maintenance.

Genuine parts for maximum availability

It goes without saying that we use only genuine Putzmeister parts in our workshops. This is the only way to guarantee consistent quality, checked for interoperability. And you can be absolutely sure that your machine meets the tough requirements with maximum performance and availability.

Excellent in quality and customer proximity

In case of need, you have two options: Either the service team visits you or you take your machine to one of our service workshops. The latest tools, software analysis solutions and genuine parts ensure that your machine is operable again immediately.

All Putzmeister workshops and the workshops of our international Putzmeister partners meet our high-quality standard. Especially when it comes to manufacturer's inspections and acceptance procedures in accordance with specifications.

Induction at handover – everything correct from the outset

So you and your machinist can adapt perfectly to all special features and innovations

Customer training – benefit from expert knowledge

Practice-oriented learning offers many benefits: Your staff master the machine with all its special features, use the machine to optimum effect, reduce operating costs and avoid operating errors.

100 hours of customer service – avoid potential sources of error

With this customer service you receive a status report on your concrete pump as per the Putzmeister service plan.

Our services for cost-effective work

The Putzmeister service support points offer you these services – all provided by our experienced service staff:

Mandatory machine inspection – calculable costs instead of incalculable failures

Visual inspection and functional check of components for 100 % safety. The hydraulic system with cylinders, electrical system and core pump are also inspected.

500 hours of customer service – protect your investment, retain your value

Our technical customer service team is the number one choice for checking the safety and wear of your machine. You receive a status report for this, too.

Our range of training courses and seminars:

For concrete pump operators

- Training and development seminars on concrete pumps
- Training and development seminars on PUMI with piston and rotor pumps
- Regional / company seminars (in your region or on your premises)

For concrete pump mechanics

- Training and development seminars on concrete pump

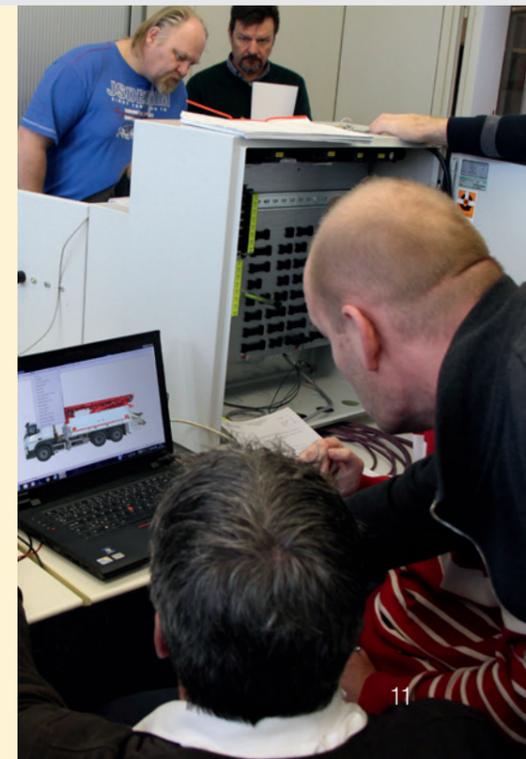

For concrete pump machinists and mechanics

- Practical days in Aichtal
- Training: Handover and induction, on-the-job training

For workshop managers and foremen

- Overview of current developments in Putzmeister concrete pumps
- Qualification at the customer workshops for requisite maintenance work

Further information can be found at: www.pm-akademie.de

The 20-4 at a glance

- **Around 20 m vertical reach with 4 arms in roll Z-folding**
- **Minimum unfolding height of 3.9 m**
- **Extensive radius** for tasks in halls, under bridges, underpasses or when building multi-storey buildings
- **Small support area: 3.40 m at the front, 2.60 m at the rear**
- **Pump geometry adapted optimally to all common types of concrete**
- **Service-friendly control system** and consistently high oil quality thanks to **free flow hydraulics**
- **Particularly wear-resistant** design of S-tube switch, which guarantees long service life
- **User-friendly hopper**
- **Smooth, optimized pumping** with EPS and EOC, protects the pump and vehicle

Please note: The figures in the brochure may differ from the series scope of the machines.
